

Collection of Water Samples

- i. Run the tube well for half an hour. Take a clean dry bottle and rinse it along with its cap with the same tube well water. Fill the bottle with running water of the tube well and tight the cap on the bottle. Mark it properly to identify the sample(Name of the farmer, village, Name of the tube well, depth of the tube well, crops to be irrigated with this water and kind of soil). Soil sample information sheet should be prepared for each sample. This sheet may be sent separately to the laboratory or enclosed with the soil sample.
- ii. Send the soil samples to the nearest Soil Testing Laboratory.
- iii. Keep a record of the Soil samples along with area sampled and a simple sketch/map for reference.
