

Water

Underground Water level of the district is 20m (approx). This is due to continuous cultivation of the Paddy-Wheat crop-rotation in the area & farmers are over exploiting this natural resource. Area under crops which require less water cannot be increased due to less availability of good quality seeds. Funds of Rs 0.042 Lac were available under Resource conservation Technology scheme. Under this scheme we covered only 7 acres in the district. There is no water recharging or water harvesting scheme in the district.
