Integrated Pest Management

To make the use of pesticides eco-friendly and need based, farmers should be made aware of the various IPM techniques. It is proposed to organize two Farmers Field School in each block in every year. The farmers are advised about the identification of insects pests, ET level and use the chemicals only when necessary.

For more effective demonstration of IPM techniques in the district, it is proposed to cover 50 villages in each year whereby a village scout will be recruited, trained, supervised and monitored. The efficiency of this system has already been effectively demonstrated on a smaller scale in some of districts of the state. The detailed Physical & Financial proposal is given as under:-

Item	Funds required for subsidy					Total
	1 st Year	2 nd Year	3 rd Year	4 th Year	5 th Year	
Farmera Field	8	8	8	8	8	40.00
